RICHMOND, VIRGINIA

Wood's High-Grade Lawn Grass

To Make a Lawn

The fall months are always considered as being particularly favorable for the seeding of new lawns or the reseeded of old ones. For new lawns, preparation of the seed bed is of the greatest importance and too much care cannot be given to this. The ground should be broken and thoroughly pulverized to a depth of at least six inches. If the land needs lime it should be applied at this time and well worked in. Repeated raking of the surface at intervals of several days will aid in killing any volunteer foreign growth and help to provide a clean seed bed. One or two days before seeding, work a good application of **Wood's High-Grade Sheep Manure** into the top two or three inches. Broadcast the seed evenly, half one way and half the other, cover lightly either by raking or with a drag and roll with a light roller. Keep moist, using a fine spray to avoid washing and after germination is well started, water only when necessary. Pull out any weeds that appear.

What Grass to Sow

In Virginia and farther north, in westerly sections of the Carolinas and farther west, sow **Wood's Super-Green, Wood's Evergreen and Shady Park Lawn Grasses**. In other parts of South sow **Wood's Emerald Park Grass**. Under trees and shaded places sow **Wood's Shady Park Lawn Grass**.

Renewing Old Lawns

Every Fall and Spring sow more seed. Cut the grass close, apply a good fertilizer and rake in and broadcast the seed evenly, one pound or more per 500 square feet, according to the stand and again run the mower over the lawn. This will put the seed into the soil. Water freely.

How to Cut Your Lawn

Cut when two to three inches high and keep cut regularly but never shorter than one and one-half inches unless during cool weather. Be sure your mower is kept sharp. A dull mower bruises and injures the grass. During hot weather it is advisable to raise the mower blades.

Wood's Winter-Green Lawn Grass

As its name implies, this Lawn Mixture will produce a beautiful green lawn through the winter months when many other grasses are dormant or not at their best. Especially recommended for broadcasting on top of established lawns to freshen them up during the cold months. To seed, simply cut the existing lawn close, rake with a sharp rake, broadcast 1 to 2 lbs. of **Wood's Winter Green Lawn Grass** per 100 square feet and again run the mower over the lawn. The result will be a velvety green lawn through the winter months. For best results, seeding should be done not later than October, although later seeding will produce good results if the weather remains open.

Daffodils and Jonquils

Among early spring flowers these are in the front rank of popularity. Appearing just after winter, they animate our gardens with masses of gold and silver, while their fragrant blossoms in the home are invaluable for decorative purposes.

Culture Out-of-Doors. All varieties of *Narcissus* should be grown in clumps and patches in every suitable spot, and there is not a spot where grass will grow in which *Narcissus* will not succeed. In planting be guided by the size of the bulb, allowing 4 to 5 inches between small sorts and 6 to 8 inches between large varieties. The bulbs will soon completely fill the space, forming a compact mass, and it is then their flowers are produced the most freely. Plant about 5 inches deep, according to the size of the bulb.

WOOD'S HYACINTHS

CULTURE IN POTS: Use any good soil, mixed with sand, potting so as to leave the top of the bulb even with the soil. For a single plant, use 4 or 5-inch pot, but the effect will be prettier if several bulbs are planted in a larger pot, and still more effective if all are of one color. Press the soil firmly around the bulbs, but do not pack it underneath. Sink the pot in the earth about 6 inches, covering with soil, choosing a location that is not too wet. For a succession of blooms, bring the first out about December 1st, and every two weeks thereafter, until February 1st. Keep moderately warm and when they begin to bloom, give plenty of water and as much fresh air as possible. Too much heat dries up the flower and shortens the blooming period.

CULTURE IN OPEN GROUND: Any good garden soil will suit. If clay or very heavy, do not cover more than 3 inches; if light, from 4 to 6 inches. Protect with manure, leaves or coarse litter to prevent freezing.

ANNE MARIE. A beautiful tall, pure pink spike, very early, easily forced.

PINK PEARL HYACINTH

A field of our **ATLAS 66** seed wheat in Eastern Va., making 40 bu. per acre on land that normally yields 25 bu. It stood up in a terrible storm that destroyed many crops. Note how thickly it stools out, with a big heavy head on each stalk. At Kendale, in Essex Co., Va., a 95 acre field of poor light sandy soil that never yielded over 1,800 bu., made 2,800 bu. of Atlas 66. Farmers came for miles and said it was the best wheat they ever saw, practically no disease, withstood a severe storm that flattened other wheats. It made a record 52 bu. per acre for a Caroline Co., Va. farmer.

Atlas 66 averaged 32.8 bu. per acre 2 years in all Piedmont and Coastal Va. experiment station tests, 4 to 8.5 bu. more than other wheats. It outyielded older varieties 3 to 10 bu. per acre, and is recommended from Georgia to Md., except in high elevations. It averaged 33 bu. per acre, highest in 18 N. C. tests 5 years, 6 to 11 bu. above most wheats.

It is the most rust proof wheat, highly mildew resistant, has very dark green foliage, vigorous growth, best for winter pasture. Named for its extremely stiff straw, medium tall, easily combined, it stands up on rich land where others lodge. Same maturity as Leap's. It is beardless, has good, big grain. It has 3% more protein, superior gluten and baking quality and brought 10c. bu. premium over local wheats at N. C. mills. It is more rust resistant than Atlas 50, has slightly shorter, stronger straw, better billing quality and yield.

KENLAND RED CLOVER

The U.S.D.A. and state experiment stations recommend Kenland far above other Red Clovers for the southeast. It is much more resistant to anthracnose and other southern adversities, grows off faster, crowds out weeds, resists cold winters, and gives much higher yields of hay. In a U.S.D.A. test Kenland had a perfect stand where other disease resistant red clovers were half taken over by weeds and some had completely died out. To crowd out summer weeds add 2 lbs. Kenland and 5 lbs. Alfalfa when seeding Ladino. Tall Fescue and Orchard Grass for full grazing the first season.

ITALIAN LADINO CLOVER

Ladino clover originated in Italy and the production of seed in this country is from seed produced in Italy. Tests of Ladino and other strains of white clover from all parts of the world have been made in this country and it has been found that Italian Ladino is equal to or better than domestic seed for grazing or hay.

One of the largest growers of Ladino Clover in California writes: "There is a fairly large field here locally which has been in four or five years, and which is certainly an excellent testimonial for Italian seed. It has a much more luxuriant growth than either California or Oregon seed. We expect to have this lot of seed ourselves and expect to have local demand to take care of this particular lot."

We are fortunate in securing a car of very high quality Italian Ladino seed, which we have recleaned, over 99% pure and 90% germination. It meets P.M.A., U. S. Dept. of Agriculture and Federal Seed Improvement Act requirements. Tested by the University of Bologna, with international certificate of origin and variety. We recommend it highly to our most discriminate buyers.

CRIMSON CLOVER

Our Imported Crimson Clover is brighter and equal or better than Tennessee in quality and adaptation. 95% of the Crimson sold in the Southeast last year was imported. The short Tenn. crop brings a premium not justified, as imported seed is equally adapted. Both meet P.M.A. requirements. during winter months when green feed is most needed.

WOOD'S SEED ABRUZZI RYE

We are the only recognized foundation growers of Abruzzi Rye. For years we have bred for quick fall and heavy winter growth and grain yields. This insures earlier fall and more winter pasture or cover. Our strain yielded a record 54.6 bu. of grain per acre at Clemson, S. C. We clean Rye on machinery devoted exclusively to Abruzzi.

Abruzzi Rye is attacked by fewer insects and disease than other small grain, does better on light land with less fertilizer. It can be sown over a longer period, is more winter hardy and furnishes more winter pasture.

Gill Flowers and G. F. Wood inspect our **ARLINGTON OAT** plots. Planted thinly in 3-ft. rows they stool out vigorously, almost touching rows. We lead in the production of this wonderful new oat that promises to be the most popular in the Upper South. For 5 years it outyielded other oats in grain, pasture and hay in U. S. D. A. and state tests from Piedmont Georgia to Va., Md., and Ky. 170 bu. per acre in one test. It averaged 9,200 lbs. of hay and 100 bu. of grain per acre in all N. C. tests. The state average was 30 bu. for oats. Farmers say it produces 85 to 100 bu. per acre on ordinary land, where other oats yield 40 to 50 bu. It made 101.5 bu. per acre on N. C. waste broomsedge land.

Arlington, bred from Lee, kept its extreme vigor and winter hardiness, but is resistant to crown rust, smut, mosaic and red leaf, is 10 days earlier, has stronger straw, $\frac{1}{4}$ less lodging, and yields more grain and forage than Lee. It can be planted later than most oats, a big help following soybeans. It grows off faster, has more upright, wider leaves, more fall growth and winter grazing than other oats.

Poor stands stool out to normal crops where others would make poor yields. It has large spreading heads filled with big, plump, golden kernels, that are awnless, thin hulled, of high test weight and feeding value. Our crops grown from Registered seed, passed Certified field inspection. To recertify in Va., plant our C. S. S.—Certified Stock Seed.

ALFALFA SEED

Over 99% Pure. 90% Germination. 89% Live Pure Seed

There will be almost no new crop Kansas Alfalfa Seed for this fall's planting, due to the terrific rains and storms. We have available for immediate shipment new crop Oklahoma-approved Alfalfa. This is premium quality, testing well over 99% pure and 90% germination. We have sold Oklahoma-approved Alfalfa for a great many years and it has given outstanding results throughout the East. We consider it equal to Kansas for this section, although Kansas, when available, is worth considerable premium.

CERTIFIED ATLANTIC ALFALFA is especially vigorous, high yielding, highly resistant to leaf spot and foliage disease, resists bacterial wilt, is winter hardy, and adapted to less fertile soils. It has outyielded other varieties in tests throughout the East and South. It's fast growth and rapid recovery makes the maximum hay and pasture production.

And we know that they will grow before they are sent out. Even then they occasionally do not come up due to causes over which we have no control, such as covering too deeply or not deeply enough, too little or too much moisture, cold weather, insects or a crust through which the sprouts cannot penetrate, etc.; therefore T. Orchard Grass vs. Tall Fescue

The Tall Fescues, Ky. 31 and Alta, are identical in growth and production. As Alta is cheaper it is preferred. They cost 2 to 3 times more than Orchard, which makes as much growth but is far superior for pasture or hay, much more palatable and nutritious, making much better quality hay. Fescue leaves roll up, making tough hay. Orchard withstands winter killing better, makes more early spring and summer growth, crowds out weeds better, recovers quicker when cut and produces better aftermath growth.

Orchard furnishes more grazing, as animals eat more of it. In experiment station tests steers averaged 1.9 lbs. daily gain on Orchard-Ladino pasture to 1.6 lbs. on Ky. 31-Ladino. When animals had equal access to both they grazed 2,500 lbs. dry weight of Orchard-Ladino to 2,000 lbs. Fescue-Ladino. Ladino dies out quicker with Fescue than with Orchard.

Bill Wood and Dr. T. R. Stanton, U. S. D. A., chief oat breeder, studying improved strains of Fulgrain oats in our breeding plots. He says Wood's Fulgrain 3 is much more vigorous than ordinary Fulgrain. It is ten days earlier, maturing before hot weather and rust damage. Bred ten years thru severe Va. winters, it is more winter hardy. It resists storms, smut and the dread Victoria blight, which can wipe out other Fulgrains. It stools profusely, has wide dark green leaves, short sturdy erect straw, ideal to combine. Heads are long, well balanced and fruit heavily. Big plump grains, low in hull, high in feed value. Wood's Grain Pasture Mixture

Furnishes more grazing in less time and at less cost than any other crop. It keeps more animals per acre in good healthy condition in winter, when feed costs are high, and permanent pastures short and need a chance to recover from close grazing. Saves expensive labor in feeding. It is highly nutritious and relished by all livestock and poultry. The grains are balanced with legumes and rape to supply protein for growth and warmth, but cannot cause bloating. For continuous grazing in fall, winter and spring, it has ideal proportions of Crimson Clover, Rape, Hairy Vetch, Austrian Winter Peas, Abruzzi Rye, Beardless Barley, Winter Oats and Smooth Wheat. Sow early, 100 lbs. per acre, with 400 lbs. 5-10-5. Top dress in early fall with 200 lbs. Nitrate Soda. Do not graze under 3 inches. 100-lb. bag, \$9.00, in 5-bag lots, \$8.75.

Wood's Grain Hay Mixture

Makes bumper crops of nutritious hay, easy to cure and relished by all livestock. It is much more productive and palatable than oats or any other crop sown alone. Excellent nurse crop for seeding permanent grass and clover as it comes off early. It contains Winter Oats, Smooth Wheat, Beardless Barley, Hairy Vetch, Austrian Winter Peas and Crimson Clover, furnishing a balanced ration of proteins, vitamins and other food elements. An improved Fulcaster strain, like V. P. I. 131, but outyielded it, is more resistant to lodging, cold, smut, mildew and rust, has better milling quality and replaced it in V. P. I.'s recommendation for Piedmont and Coast Va. Outyielded all wheats but Atlas in 1950 N. C. tests.

All of our fields of WONG BARLEY seed were grown from hot water treated foundation stock, and passed the certified field inspection with almost no smut. Most other Wong Barley lost a fourth from smut blasted heads.

Wood's Permanent Hay and Pasture Mixtures

More Economical, Productive, Nutritious,
 Palatable than Ladino with Orchard or
 Tall Fescue. Sow 20 lbs. Acre.

Experiment station tests show yields of pasture and hay increase as more seed per acre is sown, up to 25 lbs., and as more different clovers and grasses are added. Mixtures of many grasses and clovers, including Ladino, Orchard, Alfalfa and Red Clover yielded about a third more than one clover and one grass. Ladino with Ky. 31 yielded 5,435 lbs. dry weight in 1950 but only 1,561 lbs. in 1951, as the Ladino winterkilled, leaving no legume to furnish nitrogen to the grass. The quality and feeding value was also cut. They concluded: "Using more than one legume in a mixture appears to be a good insurance investment because species differ in adaptability to soil, climatic and biological growth factors."

Our mixtures, proved superior for 3 generations, contain 6 legumes and 9 grasses, with Ladino, Orchard and Tall Fescue as a base, Disease Resistant Red Clover, Alfalfa, Alsike, Lespedezas, Paspalum, Ky. Blue, Red Top, Meadow Fescue, Timothy, Perennial and Domestic Rye Grass. They grow off faster and flourish in dry summers, crowding out weeds that retard Ladino, Orchard and Tall Fescue sown alone. They bear abundantly many years, minimizing the seeding cost. They are well balanced, high in protein, extremely nutritious and palatable. Animals eat more and grow faster or produce more milk, saving feed bills.

Permanent Pasture Mixtures 1 to 3

Contain grasses and clovers which make their maximum growth at different times throughout the year for abundant nutritious year-round grazing. They cannot cause bloating. Thousands of prize cattle have died bloating when only one grass was planted and disappeared, leaving only Ladino to graze.

No. 1. For light gravelly or sandy soil

No. 2. For good loam soil

No. 3. For moist bottom land

Wood's Permanent Hay Mixtures 6 to 8

Contain grasses and clovers which mature at the same time, making bumper hay crops, which are easily cured. They recover quickly, giving several big cuttings of the finest hay every year.

No. 6. For light gravelly or sandy soil

No. 7. For good loam or clay soil

No. 8. For moist bottom land

Wood's Southern Permanent Pasture and Hay Mixture No. 12 produces tremendous yields of the finest pasture and hay on both light and heavy soils in the Southern Coastal area from Va. to the Gulf. It contains items listed above and Carpet Grass, Bur Clover, Dixie White Clover and Birdsfoot Trefoil.
